Professional Summary

Cybersecurity-focused Computer Engineering student with hands-on exposure to SIEM, endpoint security monitoring, and log analysis. Skilled in monitoring anti-malware alerts, performing alert triage, and supporting basic incident response. Strong understanding of threats such as malware, phishing, and ransomware. Familiar with SOC operations, MITRE ATT&CK framework, and Windows/Linux environments. Currently learning Microsoft Sentinel and KQL for cloud-based threat detection. Seeking an entry-level SOC Analyst (L1) / Anti-Malware Monitoring role.

Education

B.Tech – Computer Engineering 2022 – 2026
Pimpri Chinchwad College of Engineering, Pune

Cybersecurity Skills

- SIEM (Splunk Basics), Log Analysis, Event Correlation, Alert Triage
- Incident Response (Basics), Threat Detection, Threat Intelligence
- Malware Analysis (Basics), Phishing Analysis, Ransomware Concepts
- MITRE ATT&CK Framework (Basics), OWASP Top 10
- Vulnerability Assessment and Basic Risk Analysis
- Network Security Monitoring, Endpoint Security (Windows Defender Basics)
- TCP/IP, DNS, HTTP/HTTPS Protocol Analysis
- Basic KQL (Learning), Microsoft Sentinel (Learning)

Security Tools

- Splunk (Basics)
- Wireshark
- Nmap
- Kali Linux
- Microsoft Sentinel (Beginner – Learning)

Cybersecurity Projects

SIEM Log Analysis and Threat Detection (Splunk)

- Monitored and analyzed security logs to detect suspicious activities and anti-malware alerts
- Performed initial alert triage to identify false positives and potential threats
- Created dashboards and alerts for real-time security monitoring and reporting
- Identified brute-force attacks and unauthorized access attempts through log correlation

Network Traffic Analysis (Wireshark)

- Captured and analyzed network packets to detect anomalies and malicious traffic patterns
- Investigated DNS queries, HTTP traffic, and indicators of compromise (IOCs)
- Identified suspicious connections and potential attack behavior

Vulnerability Scanning and Enumeration (Nmap)

- Performed network scanning to identify open ports and exposed services
- Conducted basic vulnerability assessment and system enumeration
- Analyzed potential security risks and system attack surface

Certifications

- Cyber Security: SOC and SIEM (Splunk & ELK) for Beginners – Udemy
- Master SIEM, Log Analysis, Threat Intelligence & Incident Response – Udemy
- CCNA Training – WebAsha Technologies, Pune
- NPTEL Ethical Hacking – Elite

Additional Skills

- Linux (Ubuntu, Kali Linux), Windows
- Basic System Administration
- Security Monitoring and Troubleshooting
- Basic Python / PowerShell (Learning)
